

1 Start The Alexa App

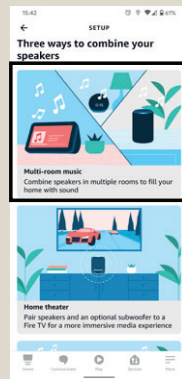

2 Click Devices

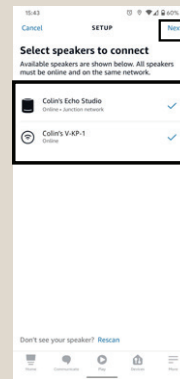

3 Click Add Device

4 Click Combine Speakers

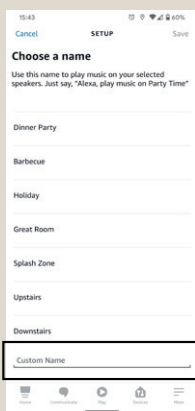

5 Choose Multi-Room Music

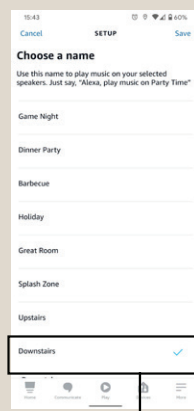

6 Choose any number of speakers and Russound Products

Click Next When Done

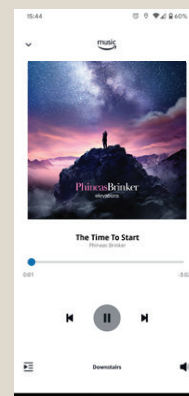

7 Scroll to the bottom

Create Custom Name

8 We Used "Downstairs"

8 Play by saying "Alexa, play some music **Downstairs**" (You say what you named your group!)

The Amazon Alexa app is used to create groups of VoicePlay devices to use for synchronized audio playback. Once the groups are created, they are available to use with voice control from anywhere in the home. The Alexa app is no longer needed to play music or use the groups. VoicePlay devices can even be in multiple groups for you to use when needed. For example, a Kitchen speaker might be in one group called "Dining Area", in a second group called "Downstairs" and in a third group called "Everywhere". You can then just ask Alexa to play your music on the speaker or group that you desire at any time.
